SUMMARY

Computer Science Engineering graduate with hands-on experience in full-stack web development and machine learning. Proven ability to architect scalable applications using Python, Django, and modern frontend frameworks. Seeking software development opportunities to leverage technical expertise in building innovative solutions.

EDUCATION

APJ Abdul Kalam Technological University

Bachelor of Technology in Computer Science and Engineering | GPA: 7.42/10

2021 – 2025

Kannur, India

Rahmaniya HSS

Higher Secondary Education (HSE) | Grade: 96%

2019 – 2021

Kozhikode, India

NIR HSS

Secondary School Leaving Certificate (SSLC) | Grade: 90%

2018 – 2019

Kozhikode, India

SKILLS

Programming Languages: Python, Java, C

Frontend: HTML, CSS, JavaScript, React.js, Bootstrap, Tailwind CSS

Backend: Django, RESTful API

Databases: MySQL, SQLite

Tools: Git, GitHub, Postman, AWS

Machine Learning & Computer Vision: OpenCV, YOLOv8, CNN

Soft Skills: Problem Solving, Analytical Thinking, Logical Reasoning, Team Collaboration, Effective Communication

INTERNSHIP

I-NET Infotech

Python Full Stack Intern

Kochi, India

Aug 2025 – Nov 2025

- Architected full-stack web applications using Python Django implemented MVC patterns and building responsive, cross-browser frontend interfaces using frontend technologies.

TRAINING

ICT Academy of Kerala

Certified Full Stack Developer with Gen AI (MERN)

Thiruvananthapuram, India

June 2026 - Present

PROJECTS

Fitness Tracking Platform | [GitHub](#)

PHP, MySQL, JavaScript, HTML, CSS

January 2026 – March 2026

- Built a full-stack fitness tracking platform with a RESTful PHP API backend and normalized MySQL database schema, supporting secure session-based authentication.
- Developed workout logging and goal-tracking features with real-time dashboard analytics and a responsive UI, organizing frontend logic across dedicated JS modules (auth, workouts, goals, dashboard) for maintainability.

PulseTrack – Hospital Management System | [GitHub](#)

Python, Django, HTML, CSS, JavaScript, Bootstrap, SQLite

August 2025 – November 2025

- Built a role-based hospital management system using Django, implementing separate access controls for staff and patients to manage clinical workflows including appointment scheduling and patient records.
- Configured secure session-based authentication using Django's built-in security modules and handled media file storage with Pillow, following Django MVT best practices across a structured multi-app project layout.

Auto-Vision — Traffic Sign Recognition System | [GitHub](#)

Python, YOLOv8, CNN, OpenCV, CustomTkinter

March 2024 – April 2025

- Engineered a real-time traffic sign detection pipeline using YOLOv8 and a custom-trained CNN, classifying 43 categories from the GTSRB and GTSDb datasets with 95% accuracy.
- Developed a desktop GUI application using CustomTkinter with GPU-accelerated inference and integrated speed monitoring and alert functionality, accompanied by a published research paper documenting the system design.

CERTIFICATIONS

- Generative AI for Everyone – Coursera 2026
- Python for Data Science – NPTEL 2024
- Introduction to Front-End Development – Coursera 2024
